BACKGROUND

Equartis Technologies is a reputed technology and digital marketing company headquartered in Chandigarh, India. The organization is recognized for delivering state-of-the-art technology solutions and innovative marketing strategies to clients across the globe. With a forward-looking vision and a commitment to excellence, the company continuously strives to drive innovation and maintain high industry standards.

As a leading digital marketing and development company in Chandigarh, Equartis Technologies specializes in providing customized and scalable solutions tailored to the specific needs of its clients. The company comprises a skilled team of designers and developers dedicated to transforming ideas into reality through intuitive design and robust development practices. Their primary objective is to enhance user experience while increasing clients' business profitability.

The organization offers a wide range of services including web application development, software development, digital marketing, content solutions, and software tools. One of its key strengths lies in developing personalized software solutions for start-ups, small and medium enterprises (SMEs), and large corporations. Additionally, the company has extensive expertise in Enterprise Resource Planning (ERP) processes and platforms across various industry verticals such as pharmaceuticals, education, public sector undertakings (PSUs), and engineering.

SCOPE OF WORK

The scope of this project includes the development and testing of **Eqvento**, a digital event ticketing and participant management platform designed to streamline event registration, ticket issuance, and participant engagement.

The platform enables event organizers to:

- Create and manage events
- Generate and customize ticket types
- Collect participant information (email, mobile number, ticket category, etc.)
- Monitor registrations in real time
- Maintain participant records

Participants can:

- Register for events
- Receive digital tickets
- Access event details
- Log in to a dedicated mobile application to view ticket history and upcoming events

As a **Tester Intern**, the scope of my work includes:

- Functional testing of event creation and ticket generation modules
- Validation of participant registration workflows
- Testing login authentication and user session management
- Performing UI/UX testing
- Conducting regression and integration testing
- Identifying, documenting, and reporting bugs

PLAN OF WORK

Phase 1: Requirement Analysis

- Understanding business requirements of Eqvento
- Studying user roles (Organizer & Participant)
- Analyzing workflows and expected system behavior

Phase 2: System Study & Test Planning

- Preparing test plan and test strategy
- Identifying functional and non-functional requirements
- Designing test cases and test scenarios

Phase 3: Functional Testing

- Testing event creation and editing features
- Testing ticket configuration and pricing modules
- Verifying participant registration and data validation
- Testing OTP/email verification processes

Phase 4: Integration & App Testing

- Testing synchronization between backend and mobile app
- Validating login credentials using previously registered details
- Testing ticket history and upcoming events display
- Verifying data consistency across modules

Phase 5: Bug Reporting & Retesting

- Logging defects with proper documentation
- Communicating issues with development team
- Retesting resolved bugs
- Performing regression testing

OBJECTIVE

The main objectives of the Eqvento project are:

- To develop a centralized digital platform for event ticket management.
- To simplify event registration and ticket distribution processes.
- To provide a seamless login-based mobile application for participants.
- To ensure secure authentication and data protection.
- To maintain accurate ticket history and event tracking.
- To minimize manual errors in event handling.
- To enhance user experience for both organizers and participants.
- To ensure system reliability through systematic software testing.
- To validate functional correctness and performance under different scenarios.
- To deliver a scalable solution that can support multiple events and large participant volumes.

PLATFORM TO BE USED

1. Development Platform

- Web-based application (Browser-based system)
- Mobile application (Android-based participant app)

2. Operating System

- Windows 10 / 11 (Development & Testing)
- Android OS (Mobile Application Testing)

3. Frontend Technologies

- JavaScript
- React.js

4. Backend Technologies

- Node.js
- REST APIs for data communication

5. Database

- MongoDB

6. Testing Tools & Platforms

- Manual Testing Techniques
- Test Case Documentation (Excel / Google Sheets)
- Bug Tracking Tool (Jira)
- Postman (for API Testing)
- Android Emulator / Physical Device Testing
